

Swiggy Stage 2 Project Presentation

Uttej Immadi

Context - Stackoverflow Project

- The application is a backend-only implementation of the stackoverflow website
- The user can ask questions, answer them and also vote.

Technologies Used

- Nodejs
- Expressjs
- Mongoose
- JsonWebToken
- Bcryptjs

Features Of The Application

- Authentication for all the possible actions is done using JWT.
- All the user details are stored on a database using MongoDB.
- All the passwords are hashed and compared while logging in using the bcryptjs module
- Upvote and Downvote Features are implemented for both, the questions and the answers.

Let's look at a
live example!!

Thank You!!
